

A question

In the past 150 years, which technology contributed significantly to women joining the workforce?

Why the typewriter was a feminist liberation machine

The typewriter was born from a need to speed up bookkeeping, but its invention triggered a series of unexpected events. Boyer Lecturer **Professor Genevieve Bell** explains.

#GippslandDigital

1868 – invention

1873 – production

1881 – first typewriting class in NY with “superfluous women”

40 years or improvements to help speed up the typing process.

Did you know?

#GippslandDigital

- The word robot was coined by a Czech playwright in 1921.
- Eric, the first real robot was built in 1928.
- The first town in Australia to be electrified was Tamworth in 1888. It was the first place to implement electric street lights powered by a municipal power company.
- County Women's Association and the Electrical Association for Women took an active role in educating the Australian public about how to manage and tame electricity. The EAW published wiring diagrams on tea towels.
- The term "Artificial Intelligence" owes its origins to meetings at Dartmouth College in the summer of 1956.

How a country town beat the big smoke to electric street lights

The first city in Australia to use electric street lights wasn't Sydney or Melbourne — it was Tamworth. And it all unfolded in a very Aussie kind of way. Boyer Lecturer **Professor Genevieve Bell** explains.

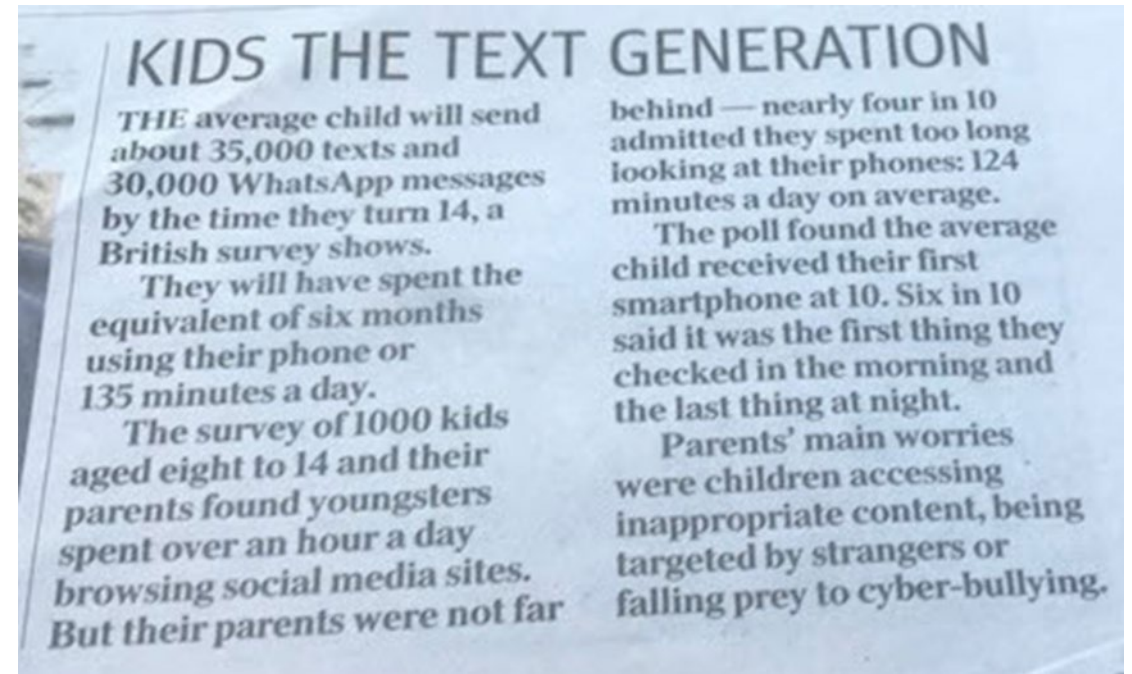

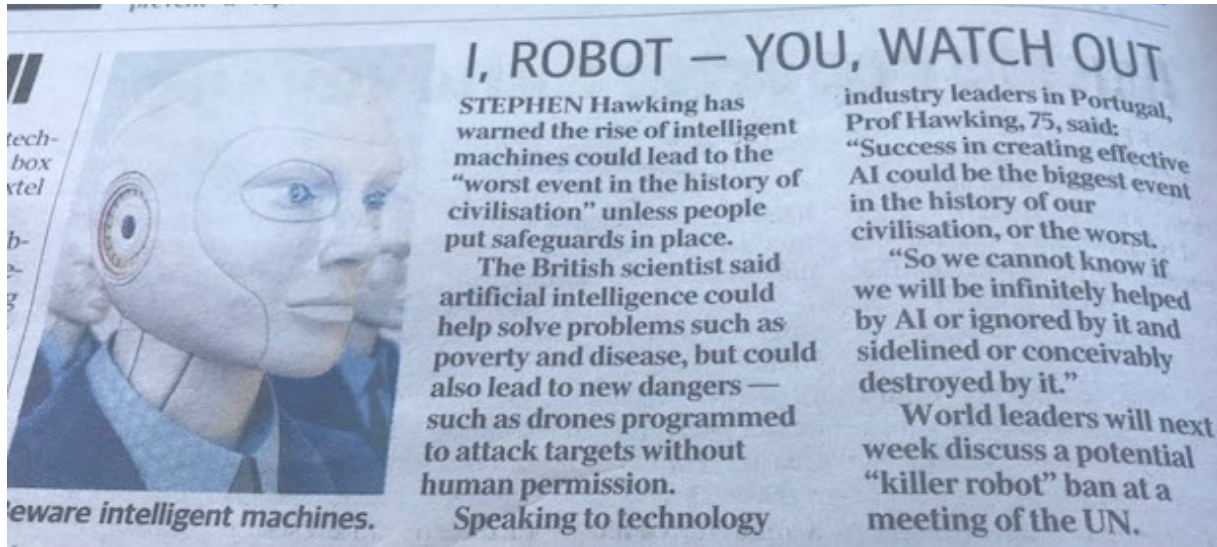

Prof Genevieve Bell :

“Whatever the technology in question, we seem to perpetuate the notion that it will change everything for the better or destroy everything we know and love. We talk about **fast, smart and connected** that way. The reality is usually far less stark. Most technologies do indeed change things. But rarely the things we anticipate and rarely in the ways we anticipated, and usually not as quickly as we predict, or as seamlessly — bits of other technologies, infrastructures and networks keep peeking through”.

All technology has a history

In 1838, the first stereoscope was invented, using twin mirrors to project a single image. That eventually developed into the View-Master, patented in 1939 and still produced today. Even before that, however, technologists were developing simulated environments. One milestone was the Sensorama in 1956.
